

Tehran's Agricultural Graduates Queuing for Education and Employment

Nowadays, Agricultural & Natural Resources Organization of Tehran Province (ANREO) faces a very critical responsibility to do. It's clear that organizing 13,417 agricultural engineers with different sub-branches is a very difficult and needs a determined and regulated planning.

Although Tehran has much potential in different agricultural sections, the variety and spread of almost many mendacious jobs, and the tendency to have a simple and easy career have made a challenging atmosphere for ANREO planners. It also shows the necessity of organizing strategic and well-prepared educational plans for graduates.

Shahrokh Ramezannezhad (B.S.), the chief of ANREO, considered the necessity and planed to have a meeting with managers and agricultural magazines' editors in chief, at the 5th anniversary of ANREO establishment.

The approach Ramezannezhad and his counterparts have assigned is to develop an independent business atmosphere of job security and importance for agricultural graduates.

Improving job skills and in Mr. Ramezannezhad's word "Agricultural Engineering in its real meaning" is of high importance for ANREO.

Latest news about food in middle east food

A Chalita Publishing House (CPH) magazine, the **Middle East Food (MEF)**, is an interesting monthly encompassing all kinds of information you may wish to know about Middle East Food industry.

MEF Magazine always strives to bring you the latest news about food, beverage, packaging and ingredients sectors of the Middle East & North Africa (MENA).

Middle East Food provides editorial coverage on a wide range of topics including country reports and project information that are of interest for industry professionals like you.

In the latest issue you will read:

- Sweet Facts about Sugar
- What's Up Dairy?
- Vadilal** Ice cream from India
- Can you Control Canning Emissions?
- Amul: The Story of a Successful Brand
- Canned Foods Make it **Easy for Families to Meet Nutrition Goals**
- California Almonds for the Whole World
- Bahrain's Imports from India** Constantly Rise
- The Pharaohs of Agriculture
- The Benelux: An Organic Bond**
- Updated 'Food Guide' to **Help Canadian Live Healthier**

Food Production & Rural Development; Netherlands Motto

In accordance with its usual trend to have full reports of developed countries' agricultural aims and strategies, Daam, Kesht & Sanat has prepared Netherlands full report for this issue:

Netherlands has 1/ 42 of Iran's expansion and is one of the most successful countries of the world that its agricultural sells have a share of 3% of its GDP. It's also one of the littlest but heaped up countries of the world.

Netherlands' agricultural Ministry needs many lands to produce agricultural products and transportation facilities, it also concerns about protection of its valuable natural resources and precious views. So its agricultural ministry has

chosen this motto: "to produce food and develop rural areas to the highest international levels"

Netherlands is also to maintain and develop its agricultural position at international competitions, based on "social investments".

According to new reports, flowers production which has a share of 63% of the global market, has reached to 5 billion dollars (3 billion dollars of which produced at greenhouses).

Netherlands agricultural ministry which is trying to develop farmers' benefits, attempts to preserve its natural resources and enrich the agricultural and fishery positions at an international level.

Oil Portioning and agricultural effects

It's more than one month that oil portioning plan has been performed. Oil price was 80 tomans per liter in the last year (almost 11.5 cents) and considering the fact that government has spent more than 5 billion dollars, it has decided to perform a plan of using intelligent cards for cars and increase the price to 100 tomans (9.3 cents).

According to statistics, Iran's transportation system has a critical need to oil. It's said that in 1384, there was a 31/7 percent of energy subsidy allocated to this section from the whole of 127,769 billion RIs. Although the energy subsidies has been 6/3% at the same year in the agricultural section and reached to 52,479 billion RIs, portioning plan had an effect on transportation system of this section so we witness a noticeable increase in the price of fruits and vegetables.

So it's critical to prevent more damages to farmers at the very first stages in order to limit further problems after the next price increase.

An Incredible Profit Lay at Crocodile Nurturing

It's about a full year from the Leader's positive verdict about the possibility of using Crocodile products, that Daam, Kesht & Sanat monthly has published many interviews and reports on Crocodile Nurturing.

Continuing to the last trend and motivated by the reader's positive feedbacks, we have an interview with Mr. Pishnamaz zadeh (B.S.), general manager of Decorative Animals Office, and changes views about the matter.

Mr. Pishnamaz zadeh believes having a suitable land is the first priority. For example, to nurture 10 male and 10 female crocodile, a land of 12 hectares will be needed. Because every crocodile would lay 500 eggs, 400 of which will be born. The necessary utility for this activity is about 6 hectares.

Iran; Thinking about livestock Import

There has been a production of 829 thousand tons of red meat in the last year in Iran and a number of 864 thousand tons has been assumed. It's interesting to note that although there was a critical decrease of frozen meat import, there are still some cases of importation from Brazil and France.

The population growth, loss of provender and epidemic diseases of neighboring countries helped the increase of red meat demand. So it's so essential to the government to regulate an effective strategy for the market.

Different kinds of import are as follows:

- 1- Importing frozen meat
- 2- Importing fattened livestock to slaughter
- 3- Importing skinny livestock to fatten
- 4- Importing livestock and frozen meat (at the same time)

Lacking a good market and various difficulties associated with importing frozen meat, are the main priorities of livestock meat in comparison with the frozen one.

Importing fattened livestock to slaughter is very critical because of many challenges happening there, like the possibility of diseases and high cost of shipment. So it seems much better to import light livestock (like sheep).

Also, it's not advantageous to import skinny livestock because of many problems like: the possibility of spreading epidemic diseases in the country, lack of provender and the possibility of genetic resources threats.

Simultaneous import of livestock and frozen meat is the only applicable solution, considering the limited number of livestock to export from Arminia.
